MESSAGE FROM Dr. D. P. MISHRA, PROFESSOR, DEPARTMENT OF AEROSPACE ENGINEERING, IIT –KANPUR

I am glad to know that organizers are carrying forward Science and Scientist as an annual event and they are holding this year’s conference ‘Science and Scientist-2014’ at the P.B. Siddharta College of Arts and Science in Vijayawada, A.P., India. I had a great privilege to participate as a guest of honor in the inaugural session of Science and Scientist 2013 organized by the Sri Chaitanya Saraswat Institute at the Synergy Institute of Technology, Bhubaneswar. Moreover I would appreciate if the prime message of the conference that our education should not be exclusively meant for obtaining facilities for eating, sleeping, mating and defending alone. An animal may easily do all those things without any education. The real purpose of education should be to develop an inquiry spirit about ultimate of objective of life which will be helpful to realize infinite potential lying hidden in each individual. Science and Scientist is an inspiring event towards this venture to introduce spiritual education scientifically in modern educational curriculum. I am also happy to be a part of the scientific committee of this event. Such events should be encouraged by all educational institutes to save our civilization from great degradation in moral principles. India is an ancient land of spiritual heritage. India must set an example to the whole world by taking up this task of the harmony of science and religion for the benefit of the entire civilization. I wish all the success for this conference to create a dialogue among scientists and young persons for the missing link between the science and spirituality.

Prof. D. P. Mishra
